

Assignment 0: Hello, World

Software Engineering - UATX - Spring 2026

Due	Before Lecture 2
Estimated time	30-60 minutes
What you need	A terminal, a coding agent, a GitHub account

Overview

This assignment is a plumbing check. We're making sure you've got a working terminal, a coding agent (Claude, Cursor, Copilot, whatever you prefer), and git/GitHub. Nothing tricky here. If you can push a commit, you're done.

Setup

1. **Create a GitHub account** if you don't have one already at `github.com`.
2. **Install git** if it's not already on your machine. Run `git --version` in your terminal to check.
3. **Set up a coding agent.** Any LLM-based coding tool works: Claude Code, GitHub Copilot, Cursor, etc. If you're not sure what to use, ask in class.

The Assignment

1. **Clone the class repository:**

```
git clone https://github.com/[TBD]/uatx-se-2026.git
cd uatx-se-2026
```

2. **Create a branch** with your GitHub username:

```
git checkout -b hello-<your-github-username>
```

3. **Create a file** at `students/<your-github-username>.md` containing:

- Your name
- One interesting thing about you
- A haiku written by your coding agent
- Which agent/model you used to write the haiku

Example:

```
# Ada Lovelace

I once wrote the first computer program, and I did it on paper.

## Haiku (by Claude)

    Loops of silk and steel
    the engine weaves what I dream
    math becomes music
```

4. **Commit and push:**

```
git add students/<your-github-username>.md
git commit -m "Add <your-name> introduction"
git push -u origin hello-<your-github-username>
```

5. **Open a pull request** on GitHub from your branch into `main`. Title it "Hello from <your-name>".

That's it. Once your PR is open, you're done. We'll merge them all before the next class, and then you can `git pull` and see everyone's introductions.

What We're Really Checking

- You can use a terminal
- You can clone, branch, commit, and push with git
- You have a coding agent installed and can talk to it
- You can open a pull request on GitHub

If anything goes wrong (git errors, GitHub permissions, agent setup), email me at aayme@loglu@uaustin.org or come to office hours. This is a plumbing check, not a test.
